ABOUT
INTELLIGENT NETWORKING [IN]™

EXCLUSIVELY AVAILABLE IN PRODUCTS FROM ASI CONTROLS

ASI Controls is on a mission to make our system integration partners as successful as possible. One of the ways we do this is by creating innovations that drive down the time and costs required to engineer customer-facing building automation solutions, energy management, and HVAC applications.

The ASI Controls [IN]™ series of applications uses cutting-edge tagging, data modeling, advanced networking protocols, and fluid integration with industry devices to deliver high-value solutions that are quick and easy to implement.

While completely BACnet-ready, the [IN]™ series of applications provide the best overall user experience when they are paired with ASI Controls hardware and sensors, which are specially designed to take the fullest advantage of intelligent networking capabilities.

EXTENDING THE ASI ADVANTAGE

With the introduction of our groundbreaking [IN]™ technology and new IntelliFront product, ASI Controls carries on our legacy of creating building control solutions with our customers and end-users in mind. All of our products help to drive down your total cost of ownership in three ways:

1. A COMMITMENT TO BACKWARD COMPATIBILITY
2. INDUSTRY-LEADING INTEROPERABILITY
3. FUTURE COMPATIBILITY

IntelliFRONT
with [IN]™ TECHNOLOGY
Available exclusively from ASI CONTROLS

Get ready for the most advanced building automation management experience you've ever had! Exclusively from ASI Controls, the new IntelliFront controller saves time and money with a features-packed system:

○ The most current tagging and data modeling protocols—working in conjunction with ASI Controls hardware and sensors, and powered by our exclusive [IN]™ technology—makes the process of engineering and deploying powerful front-end solutions incredibly fast and easy.

○ The user interface is designed specifically to provide a seamless experience across mobile, tablet and desktop environments—eliminating a need to create mobile-friendly versions of screens and cutting out the hours of programming required for less-advanced systems.

○ The latest industry and commercial protocols—such as Haystack and REST—means IntelliFront is ready for today's Edge, cloud and IoT applications, as well as future developments.

○ Easy connectivity with your legacy ASI hardware, existing BACnet devices, and other BAS applications and protocols eliminates the time and expense of engineering and installing a whole new system.

○ Unprecedented solution customization, thanks to IntelliFront's flexible architecture, provides options for a wide variety of applications and needs.

○ Robust, intuitive, and easily accessible onboard troubleshooting assistance for support and maintenance personnel.

FOR SYSTEM INTEGRATORS

▶ Leading-edge software that can help sell jobs and deliver more value to your customers.

▶ Built-in technology and automation that help engineer and deliver amazing solutions quickly and easily.

▶ Extremely affordable solution for you and for your customers, without sacrificing value.

▶ Ready for integration with all ASI Controls [IN]™ series applications, as well as ASI legacy devices.

FOR END-USERS

▶ Quickly get data and information for managers and other end-users.

▶ Robust and quick troubleshooting information and details for support and maintenance personnel.

▶ Ready for today's legacy equipment and prepared for the future with cloud and IoT capabilities.

▶ Designed for mobile users, managers, and field technicians, with complete functionality and control.

▶ Custom solution and integration capabilities on the most advanced platform.
